

Unib8nk

Oracle Divination Yield Project

Unib8nk is a divination tool for practitioners to stake & earn ethereum on alchemical pathways from matter.direct light, sourcing instant futures yield using apwine and crystal recommendations for energetic stability

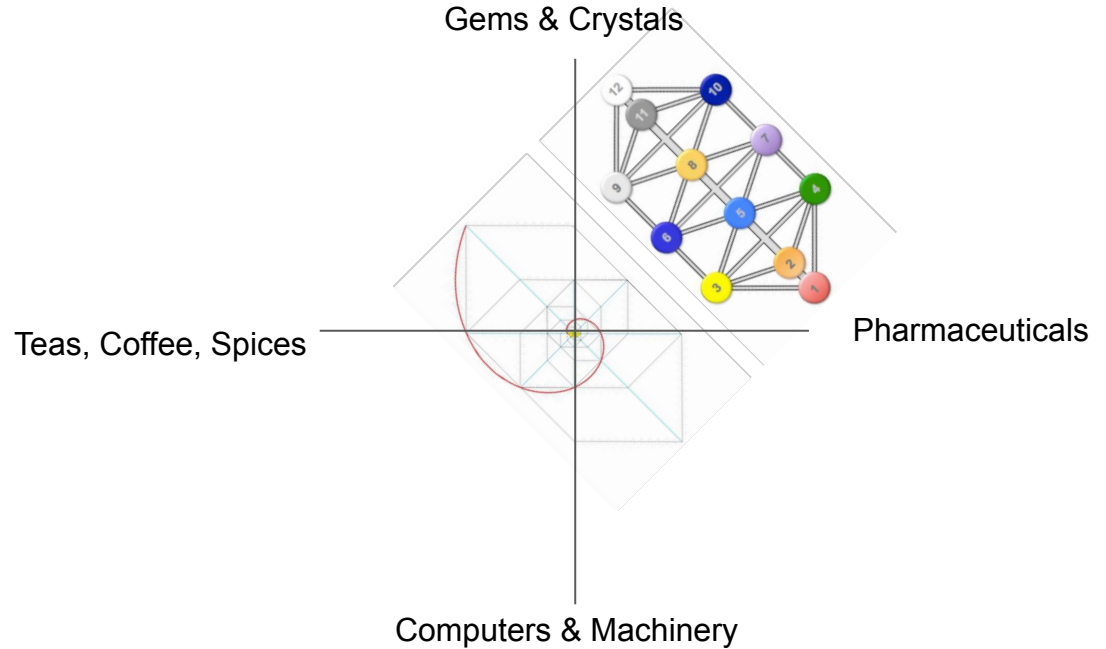

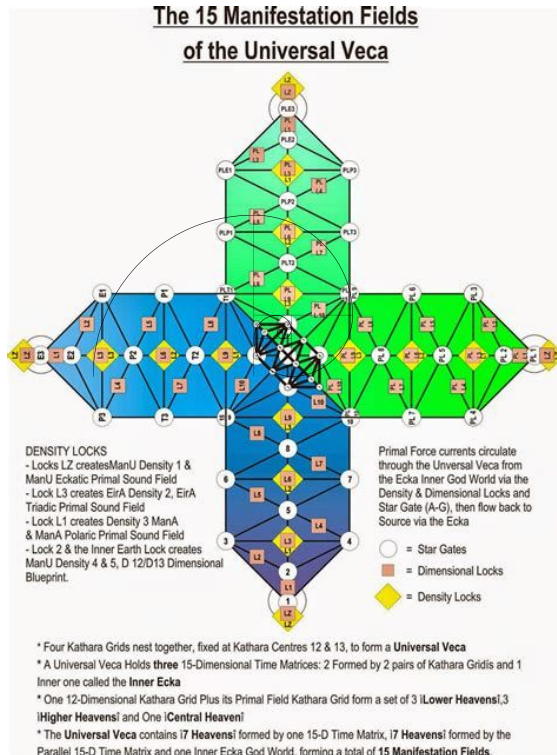

Technologies Used

- ❖ APWine
- ❖ Matter.direct direction library, a library of 255 oracle affordances

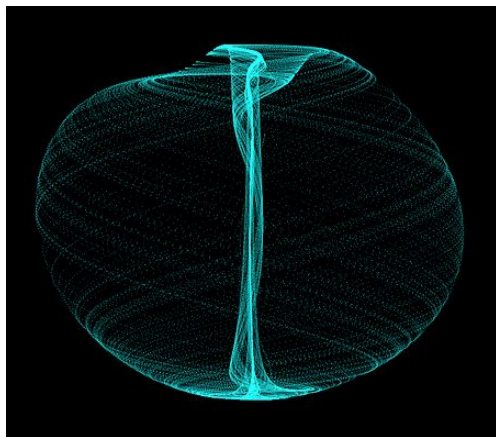

Outcome: Less machine & computer imports, more pharmaceuticals, a net can be alleviated to create a more wholesome stable structure attractor towards crystal and wellness through bravais crystal groups

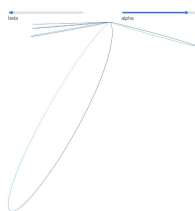

Using the abstraction of the Universal Veca via 4 kathara grids (for light and sound) to map local columbia industry, the project aims to redirect resources into greater exports of crystals through yield pathways via stable oracle harmonies

The desired goal of blueprinting Organizational Stable Structures of Aizawa attractors in an economy, via a balance between **NFT vs. Star stable swap, pharmaceutical rate, and desired APWine yield** in image A, can be tested against the current import/export ratios of columbia in image B by tuning the **alpha, delta, and beta** of the Ordinary Differential Equation attractor

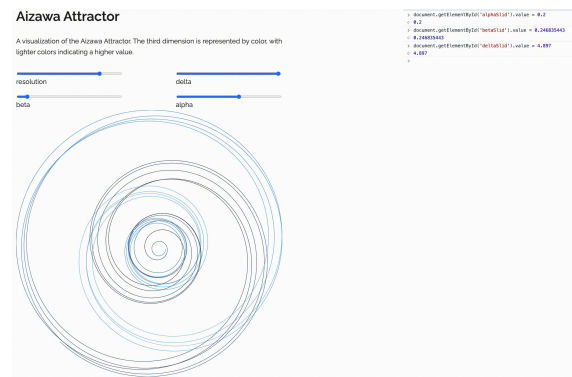

Goal

A

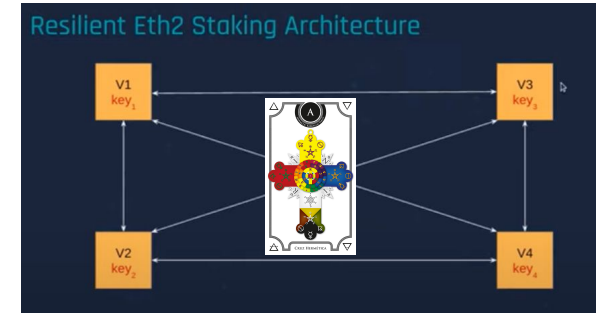

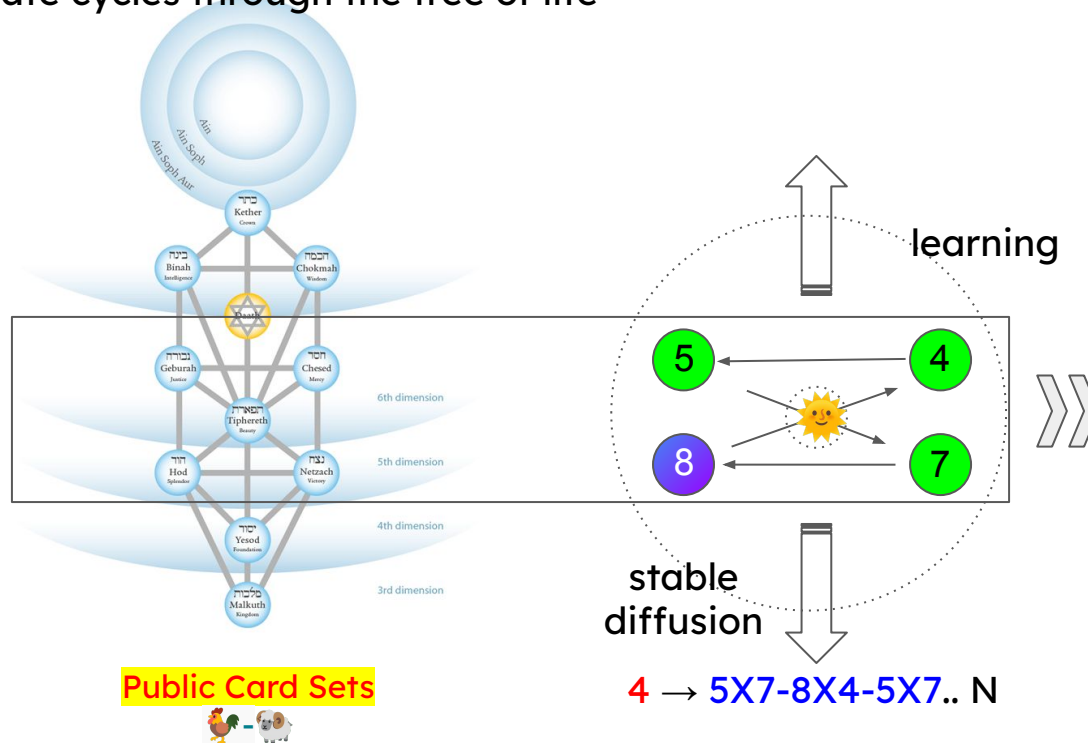

Testground
5X7-8X4-5X7..

Existing Example

Why is it useful to ground a stable attractor with this sequence?

'Secret-shared validator infrastructure for Eth2.0' can be too centralized, therefore energy must afford for **diffusion below & learning above** in a distributed game, completing multiple 'rollup' bit-rate cycles through the tree of life

Private Thoth Adjustment

The industry and their breakdowns were mapped against the kabbalah to organize future sub-categories of industry, with a keen focus on **crafting** and **manufacturing** centering around **yield & product distribution**

Direction	Description
A: W	TBC
B:	TBC
C: Yew ∇ IOHO	TBC

With 20% of machine imports, and 80% more pharmaceuticals, a net of \$9105MM can be alleviated to create a more wholesome stable structure attractor towards crystal and coffee reinvestment

Through yield generation for perpetual stable attractors and efficient distribution of supply chain value flow
